

Figure 1: A plot showing the number of observed and expected events for each decay mode. The x-axis is labeled 1H, 2H, 3H, 4H, 5H, 6H, 7H. The y-axis represents the number of events, ranging from 0 to 10. For each decay mode, there are two vertical lines with horizontal ticks: a solid line for observed events and a dashed line for expected events. The observed events are generally higher than the expected events, especially for 1H, 2H, 3H, 4H, and 5H.
